SALSS 2018 ALL ABOUT BRAINS

Dear SALSS Family!

I have the great pleasure of inviting you to what promises to be the best SALSS ever! This year, we are embarking on a journey of what I think is one of the most interesting organs of the human body – the BRAIN!

It is a very exciting and omnipresent subject; this extraordinary machine inside our head governs everything we are, think and do. It affects much more than our motor skills, sensory organs and mind. If something goes wrong in the brain, it often goes wrong everywhere.

The current research is very “hot and happening” – however, we have a long way to go when it comes to tackling some of the biggest health issues regarding the human brain. Alzheimer’s disease, ALS, Parkinson’s disease and depression are examples of conditions that in some way have affected us all and due to the brain’s huge impact on not only physical attributes, but the personality, they tend to be particularly difficult also for the people close to the patient. Having been close to several patients suffering from these diseases, it is imperative and heartfelt to me to bring all expertise together and find solutions to these maladies.

We will also continue last year’s focus on HealthTech. The era of Big Data gathering has only just begun, and with tools such as AI, ML and robotics, new treatments and diagnostics opportunities arise. Another aspect is how HealthData-based decisions will benefit patients, entrepreneurs and healthcare economics.

On top of this, exciting companies, promising Rising Stars, and innovative exhibitors will show the best that Sweden and the US have to offer. Imagine the financial opportunities and make sure not to miss out on the summit of the year! Looking forward to seeing you again in beautiful Stockholm,

Välkommen!
